

CureYou

– A Healthcare App
Divya Vasnani

Project overview

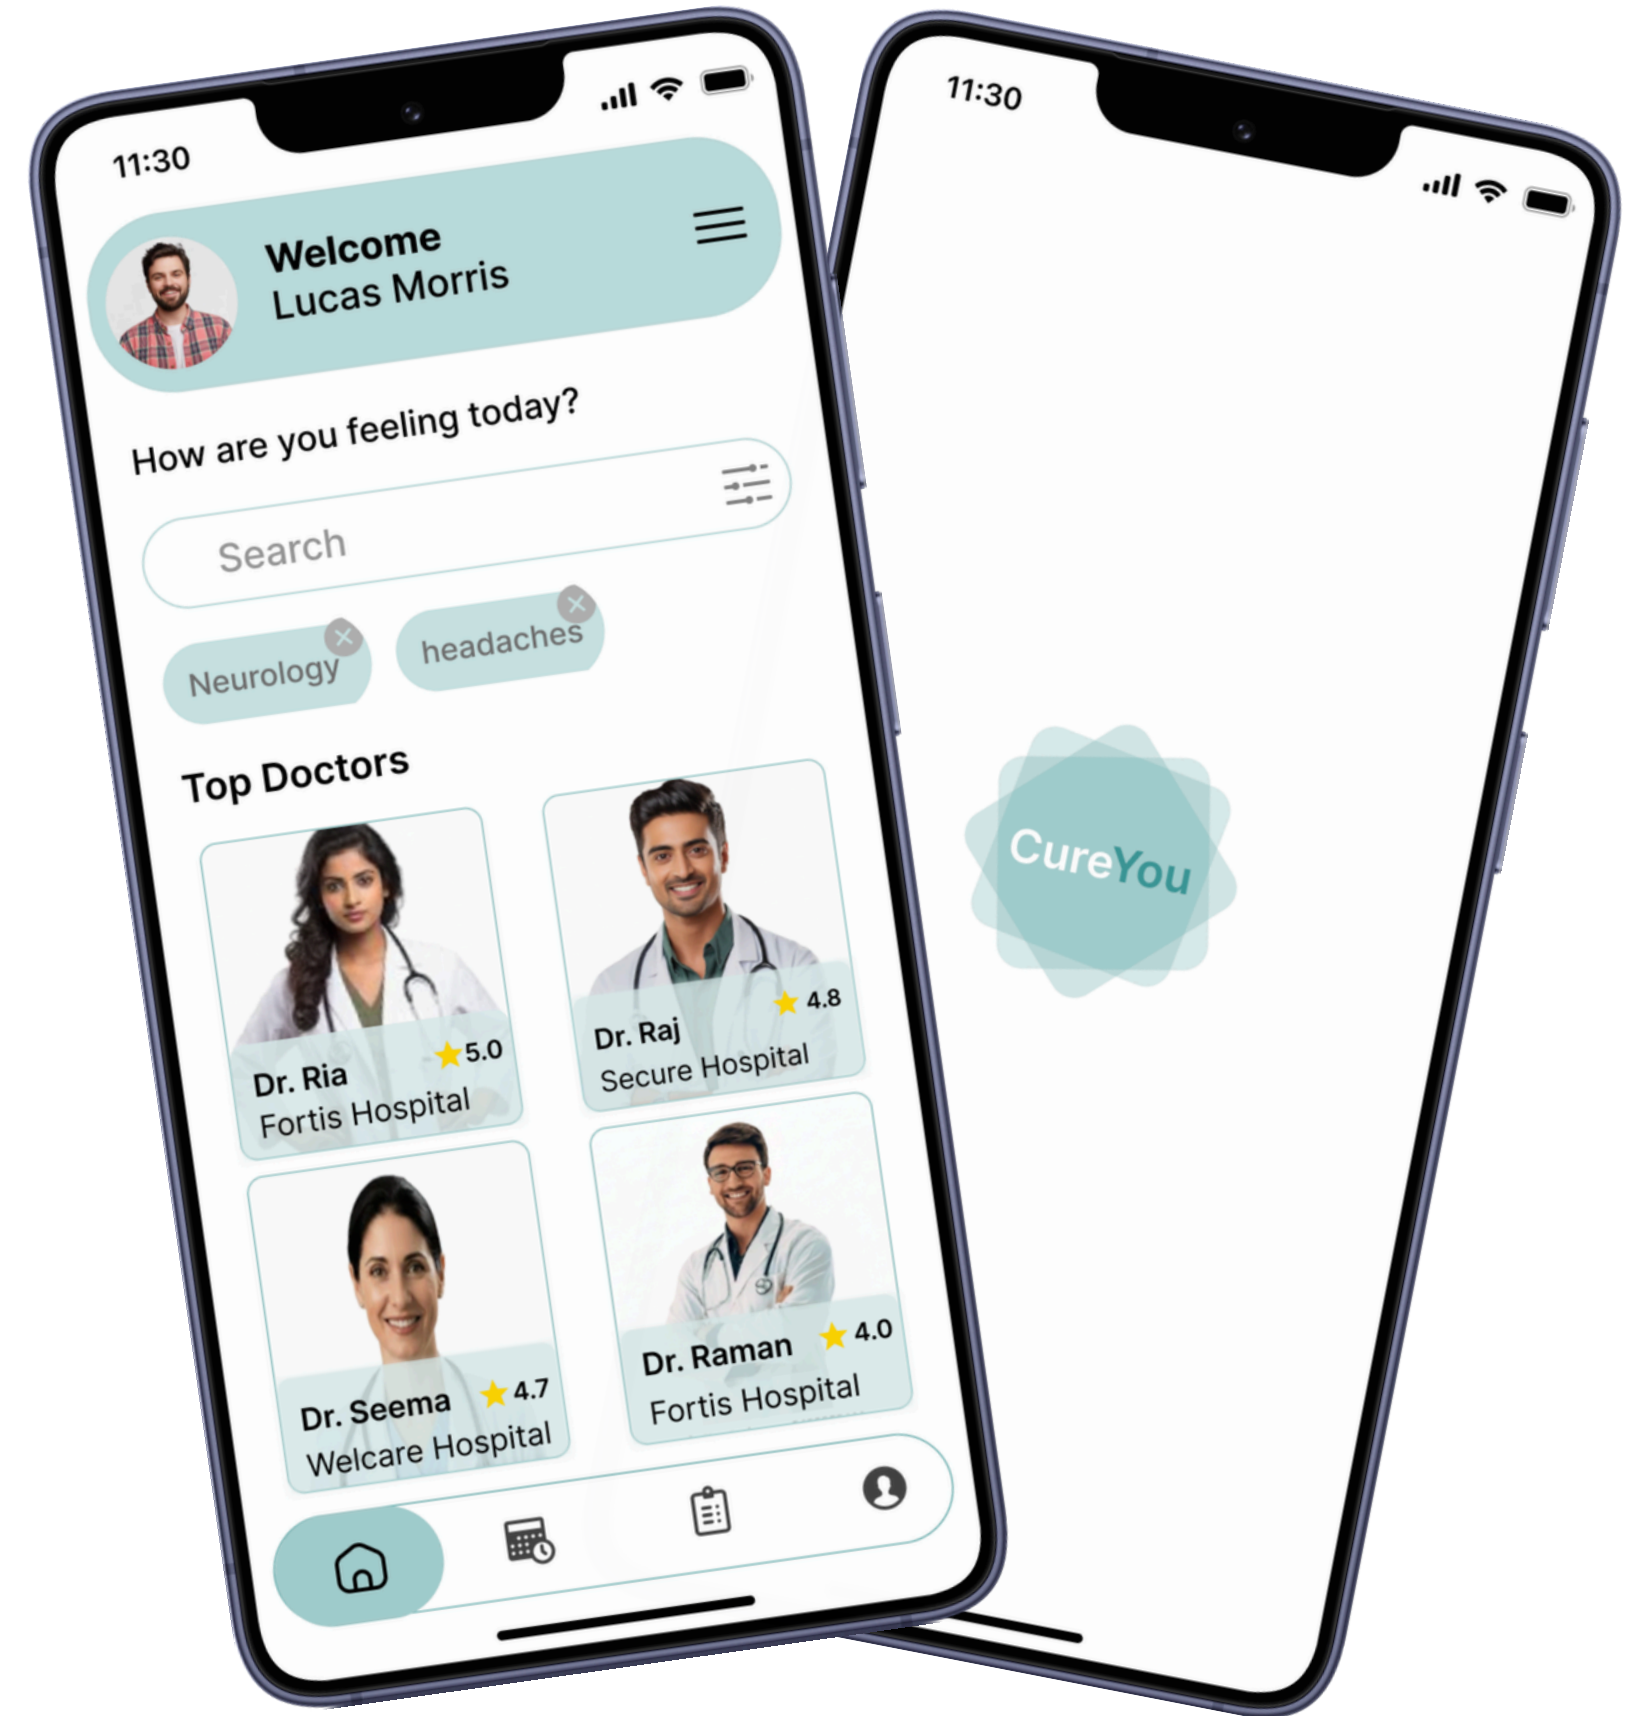

The product:

CureYou is a healthcare appointment booking app that helps users find the right doctor based on their symptoms. It makes booking appointments easier by guiding users to suitable doctors instead of expecting them to know the right medical specialty.

Project duration:

March 2026- April 2026

PROBLEM

- Users don't know which doctor is suitable for their symptoms.
- Medical specialties can be confusing for non-medical users.
- Comparing doctors, availability, and ratings is time-consuming.

GOAL

- To help users find the right doctor faster through their symptoms and make appointment booking easier.

My role:

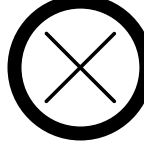

Responsible for designing the complete healthcare app experience, including user flows, wireframes, UI design, and interactive prototypes.

Responsibilities:

- User Research
- Competitor Analysis
- User Flow
- Wireframing
- UI Design
- Interactive Prototyping

User research: **Competitor Analysis**

Features	Practo	Apollo 24 7	Lybrate	CureYou
Symptom-based doctor discovery				
Simple and guided booking flow				
Easy doctor comparison				
Personalized doctor recommendations				

What I Learned and How it influenced my design:

From my research, I learned that choosing the right doctor can be confusing. That's why I designed a symptom-based booking experience to make the process easier.

User research: Pain points

1

confusion about the doctor speciality to choose

A lot of users mostly don't have an idea of what particular speciality of doctor would be suitable to treat them, and end up going to a wrong speciality of doctor.

3

No clear guidance based on symptoms

Usually in any of the apps, users are expected to choose the doctor based on speciality which the most of the times don't know, what they know is the symptoms they are experiencing

2

Very confusing interface

Home screen contains a lot of different services which confuses the users or distracts them unnecessarily

4

Booking appointments with the wrong speciality of doctor:

Booking appointments not knowing surely whether that doctor can treat the symptoms they are having, and in most cases then that doctor then suggests them a different doctor

Persona: Ketki Sharma

Quote:

"I know how I'm feeling , but I don't know which doctor to visit"

Age: 25

Education: MBA Marketing

Hometown: Ahmedabad

Occupation:Marketing Executive

Background

Ketki goes through common health issues and frequently falls ill. But she is never able to find the right doctor and is never able to find a root cause. She wants to find a quick solution to this without spending lots of time searching or browsing, as it's just confusing her more.

Goals

- Find the right doctor quickly.
- Book appointments with minimal effort.
- Compare doctors based on ratings
- Avoid search from multiple specialties.

Frustrations

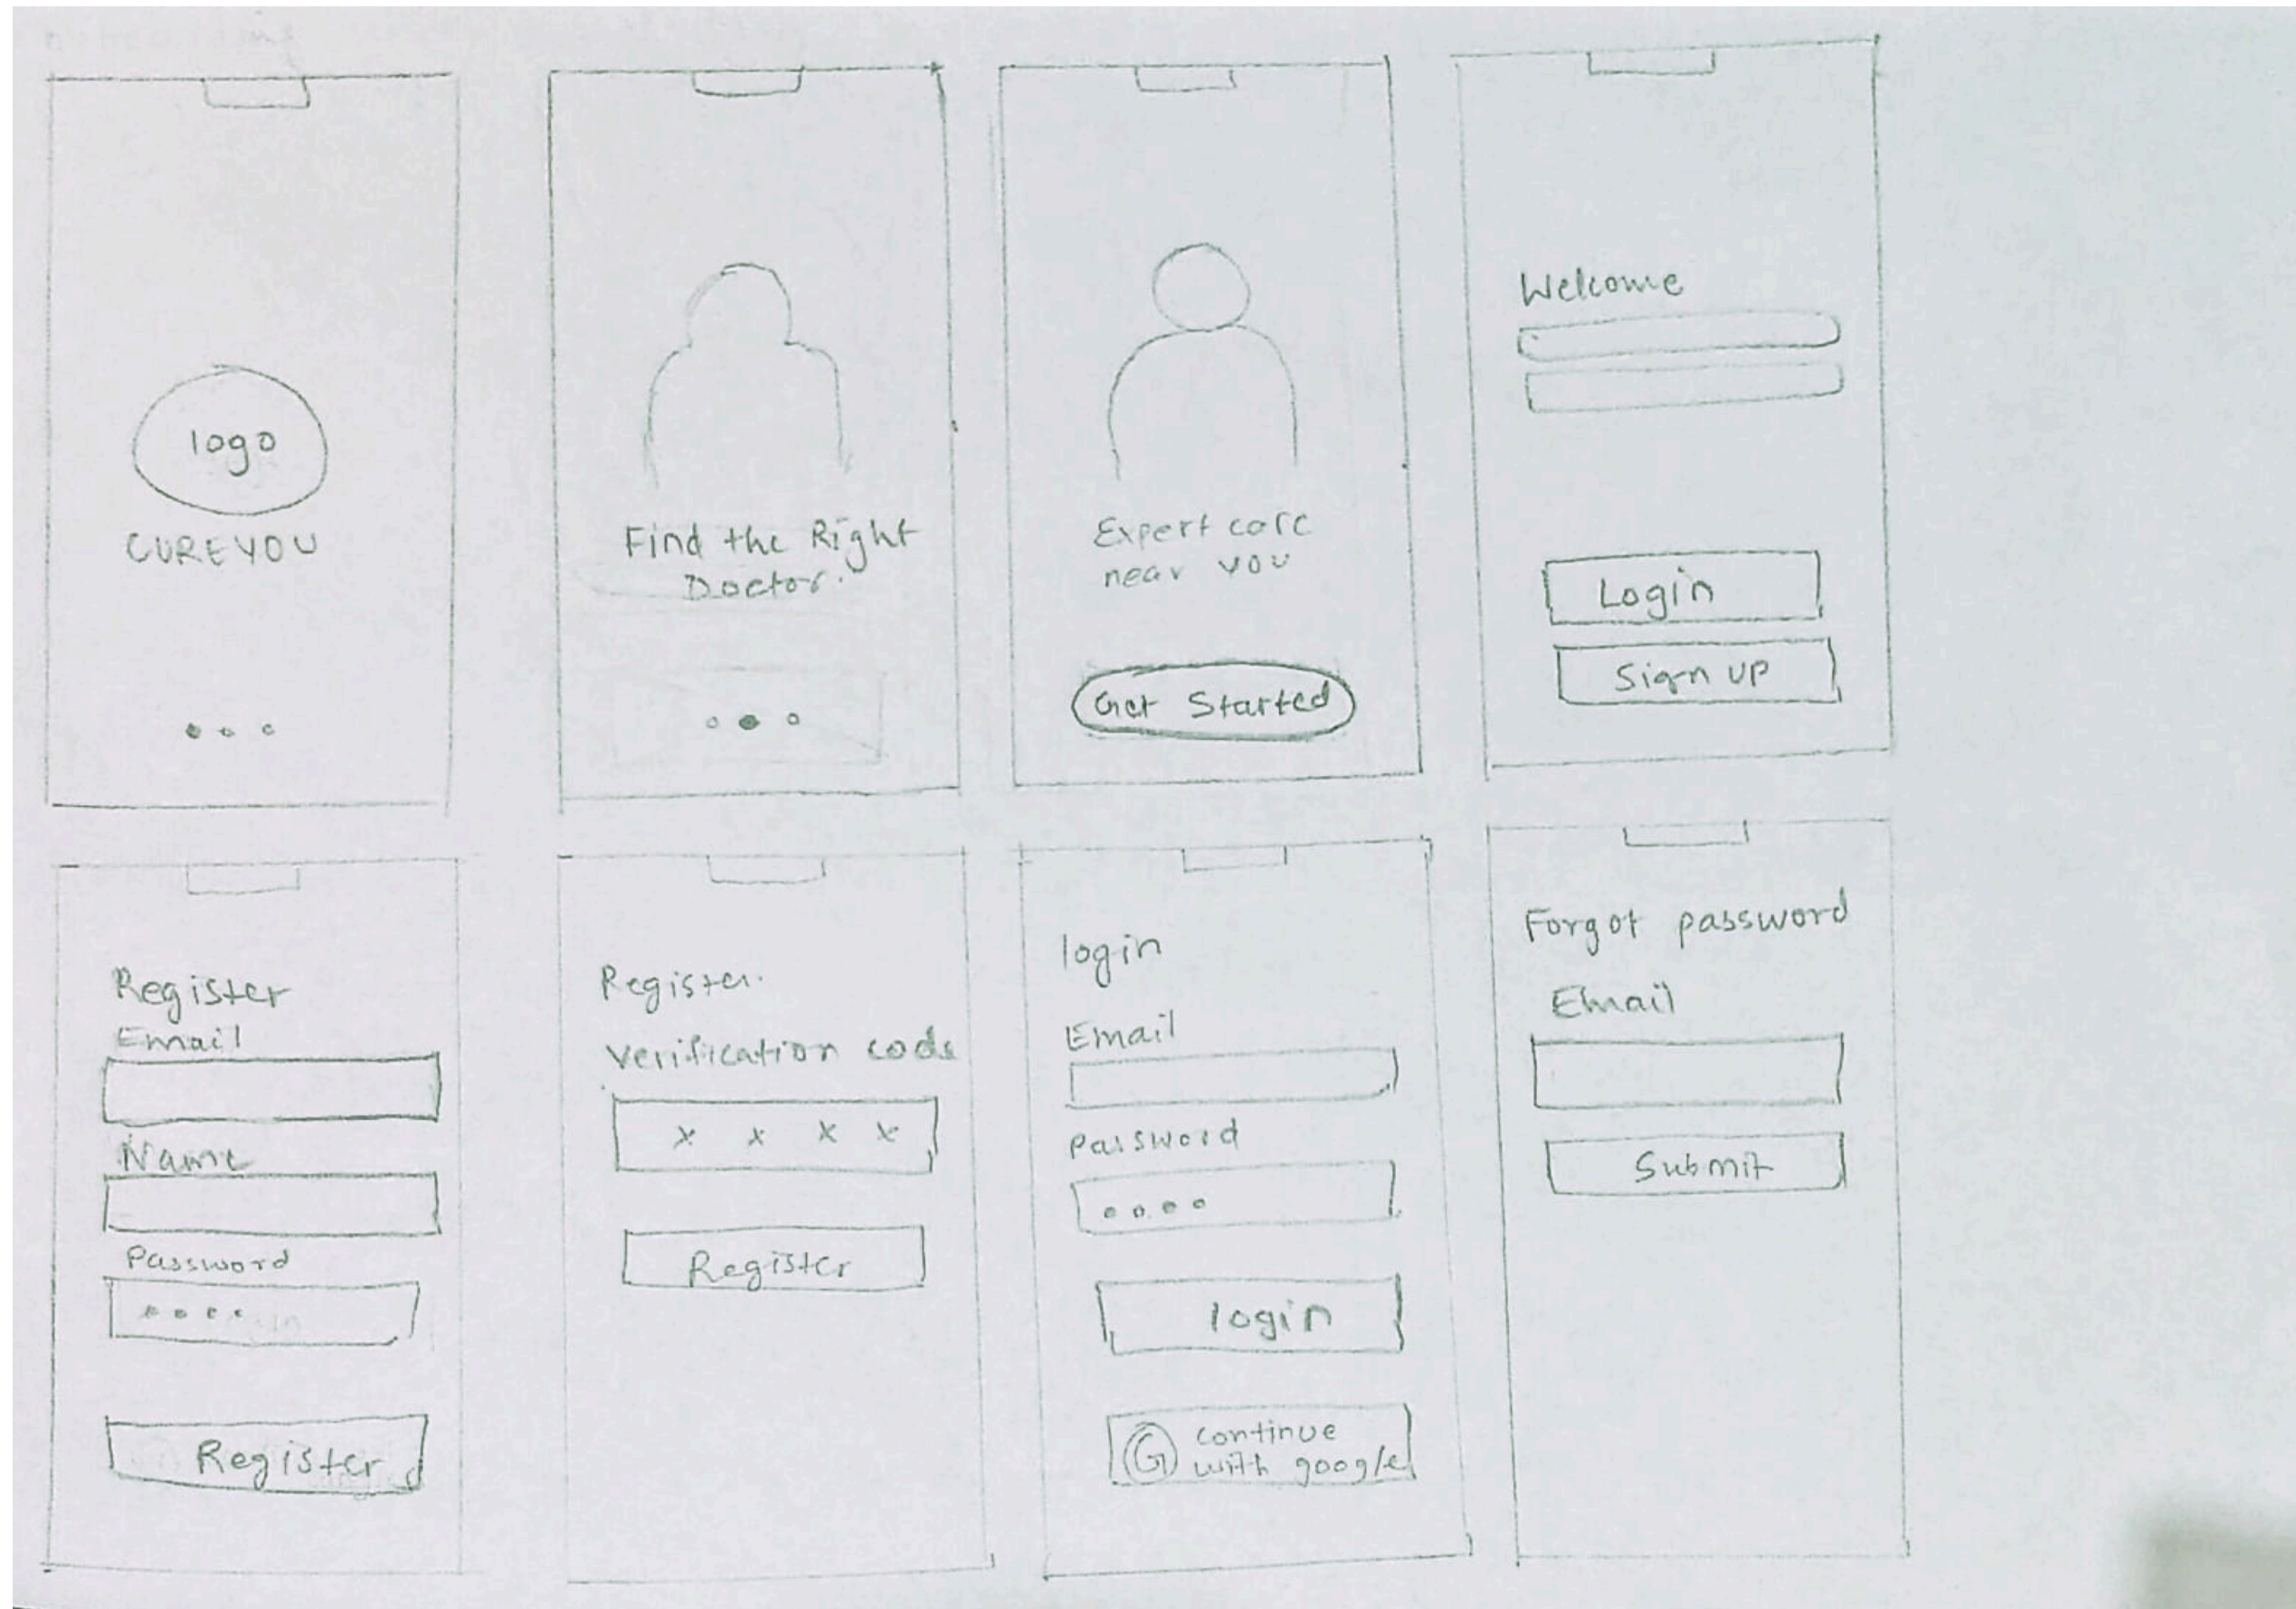

- Unsure which specialist to choose.
- Too many doctors to compare.
- Booking an appointment takes time.
- Medical specialties are confusing.

Priya is a working professional who manages everything through her phone. When she feels sick, she knows her symptoms but is not sure which doctor to visit. She wants an easy way to find the right doctor and book an appointment quickly.

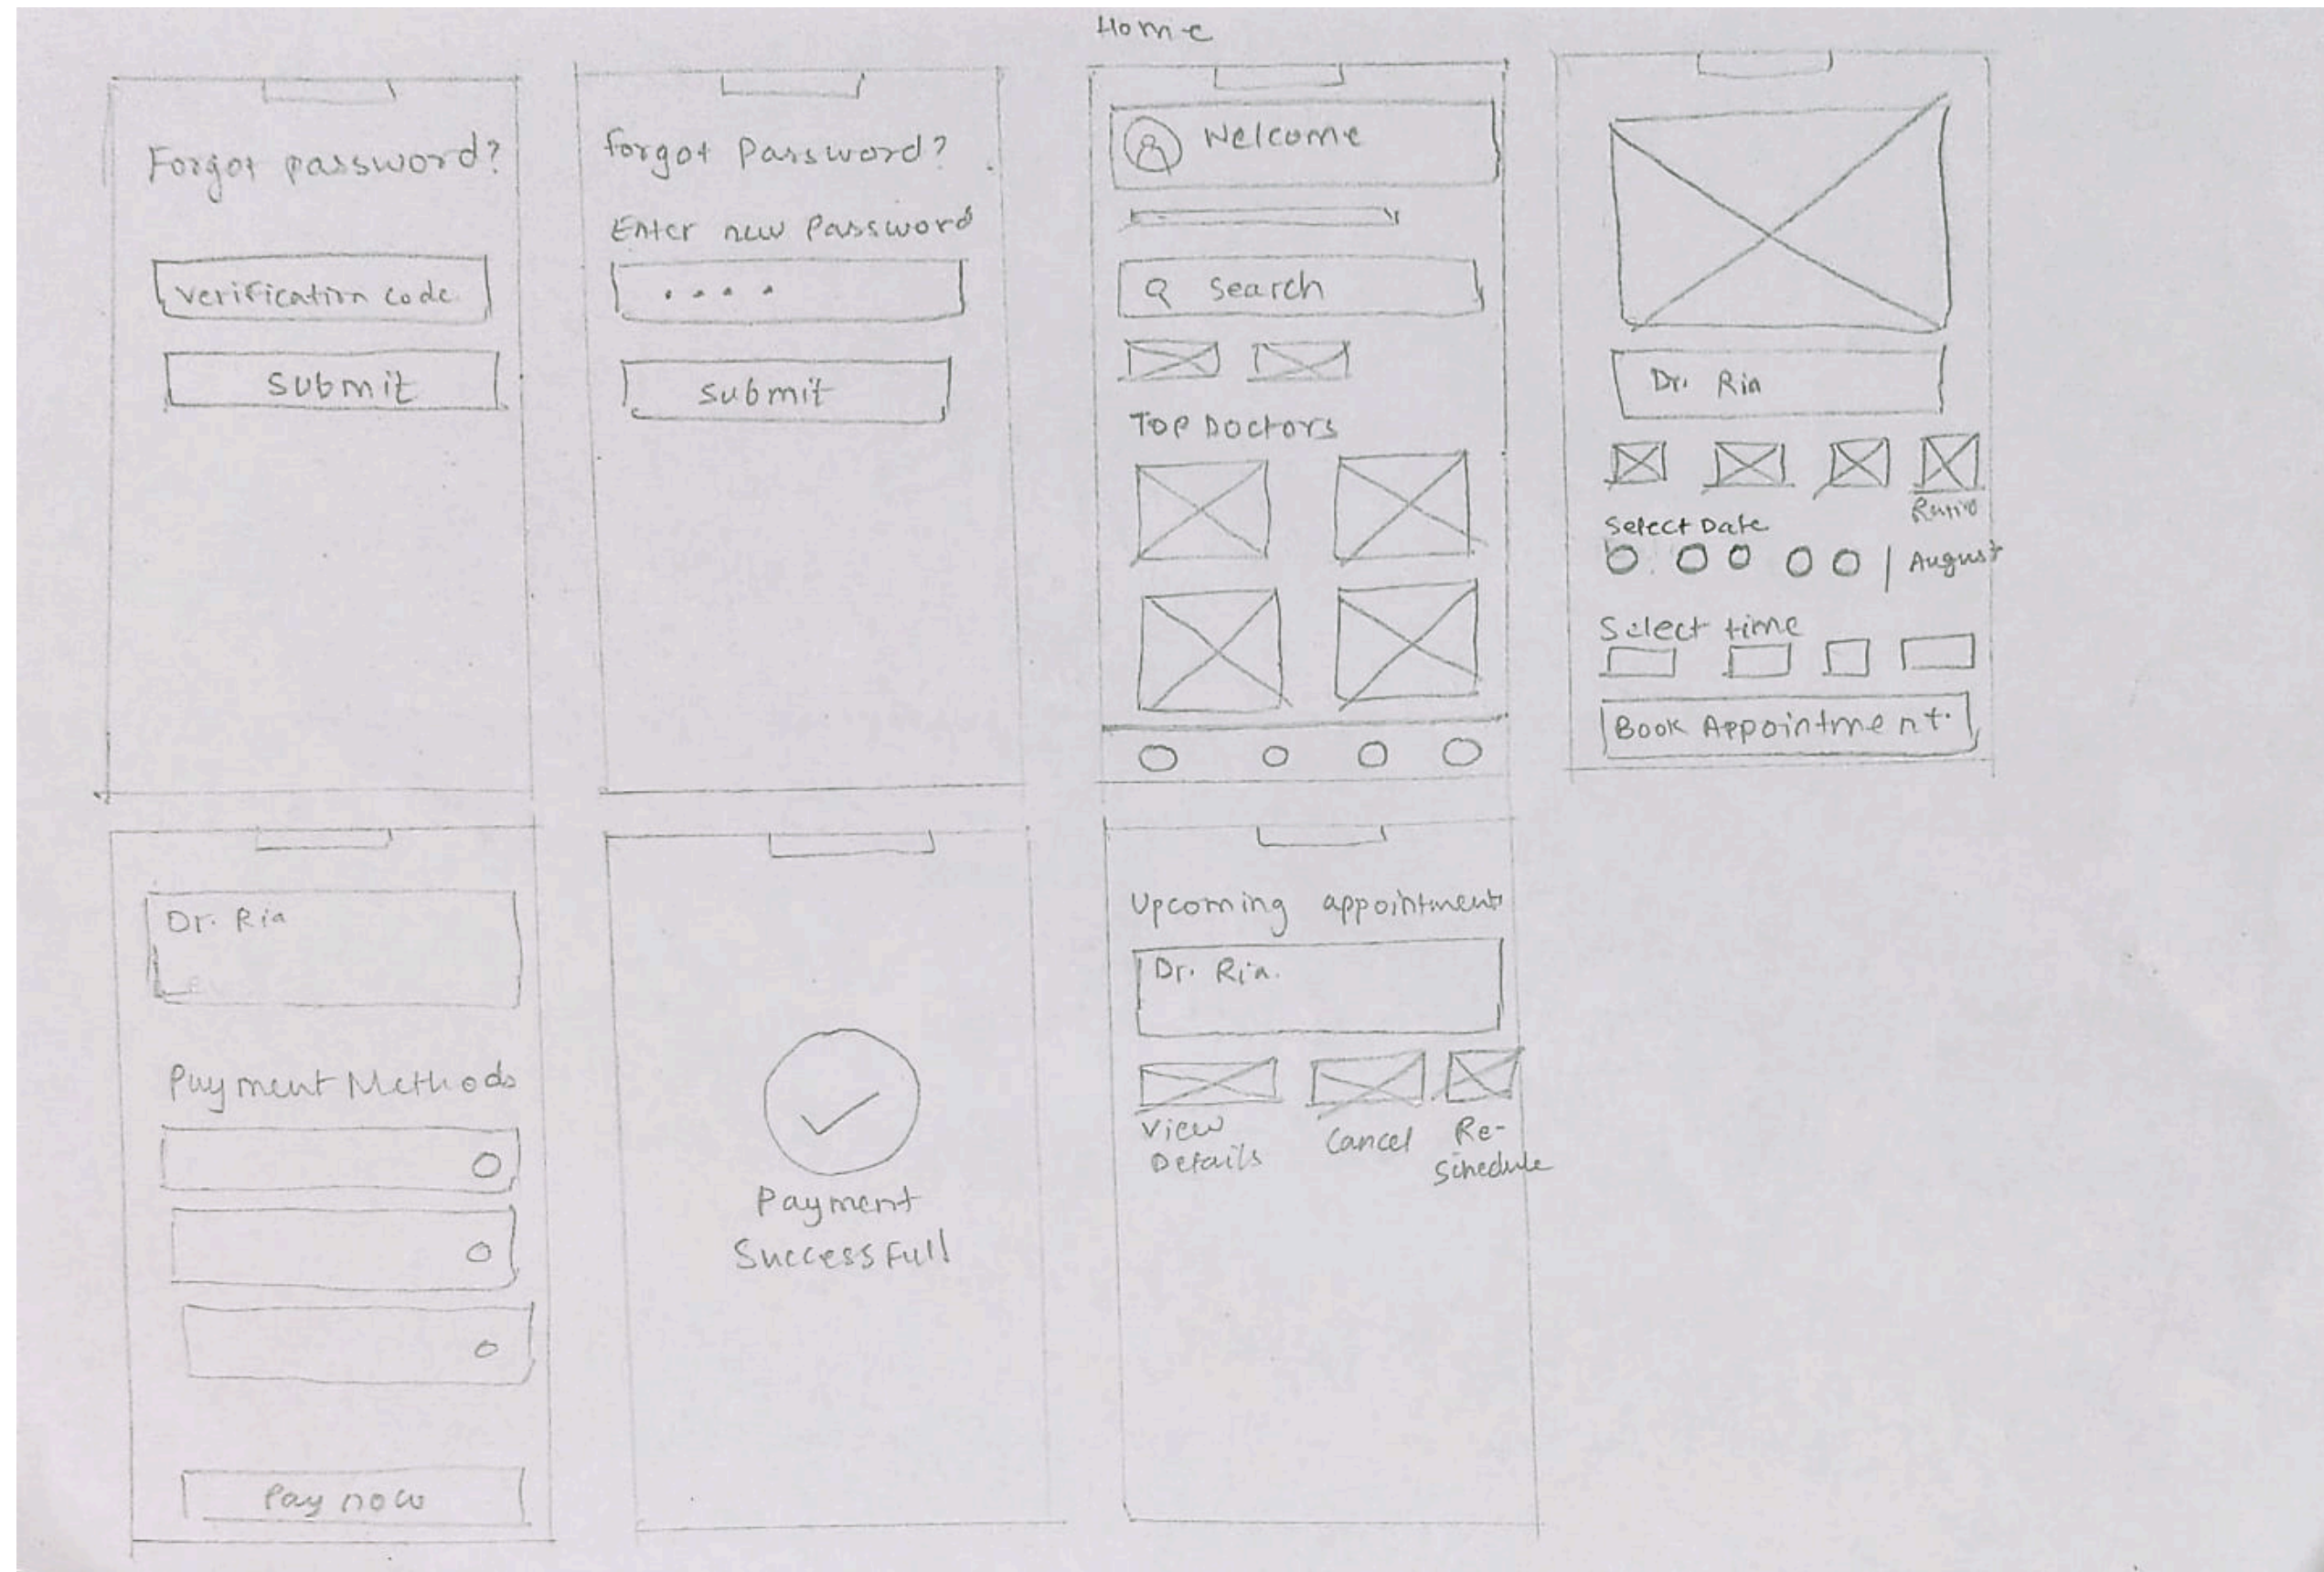

User journey map

Stage	Action	Pain Point	Opportunity
Feels sick	Notices symptoms	Unsure which doctor to visit	Allow symptom-based search
Opens app	Searches using symptoms	Too many choices	Show relevant doctors first
Views doctors	Compares profiles	Takes time	Highlight top recommendations
Books appointment	Selects slot & pays	Wants a quick process	Simple booking flow
Confirmation	Receives appointment details	Needs reassurance	Clear confirmation screen

High-fidelity prototype

Takeaways

IMPACT

CureYou makes it easier for users to find doctors based on their symptoms instead of searching through different specialties. The simple booking flow helps save time and reduce confusion.

WHAT I LEARNED

This project taught me the importance of understanding user problems before designing. I also learned how small design decisions can make an app easier and more user-friendly
